DETAILED ACTION

EXAMINER'S AMENDMENT

An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it **MUST** be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in a telephone interview with Mr. James R. Banowsky on January 24, 2006.

The application has been amended as follows:

In claim 1:

On page 2, line 16, the phrase "of the second print medium and the second print medium white point" should read --of the second print medium and the first print medium white point--.

In claim 28:

On page 9, line 6 of claim 28, replace the word "program" with --computer-readable medium--. The limitation now should read --A computer-readable medium comprising computer-executable instructions that, when executed, implement--.

Art Unit: 2624

- This action is responsive to the amendment filed on 1/6/2006.
- Claims 1-3, 10-14, 22-30, and 37-40 are pending in the present application. Claims 1, 10-14, 22-29, and 37-40 are amended. Claims 4-9, 15-21, 31-36, and 41-43 are cancelled.

Response to Arguments

Applicant's arguments, see pages 13-15, filed January 6, 2006, with respect to claims 1-3, 10-14, 28-30, and 37-40 have been fully considered and are persuasive. The prior art rejection of claims 1-3, 10-14, 28-30, and 37-40 has been withdrawn.

Allowable Subject Matter

Claims 1-3, 10-14, 22-30, and 37-40 are allowed.

The following is a statement of reasons for the indication of allowable subject matter:

Claim 1 is directed to a method of setting a printing parameter for a first print medium. Claim 22 is a computer-readable medium including the method steps of claim 1. Claim 28 is a print system including a database and a computer-readable medium that implements the method steps of claim 1. These claims identify the uniquely distinct features of setting a printing parameter by obtaining an identifier from the medium, locating a database and downloading information, and deriving a new color profile based upon the black and white point difference between a first print medium and a second print medium.

Art Unit: 2624

The prior art taken singularly or in combination fails to teach a method of color profile transformation that calculates a new color profile for a print media used in an intended printer by determining the black point difference and white point difference between two similar medium, and forming a new color profile by summing the difference of the white points and black points of the respective media.

The advantage gained over the prior art is that the new color profile derived in the instant invention considers both the white point and black point of a media in its comparison with regards to a similar media and its corresponding properties for its use in an intended printer, providing a more complete color profile of a paper / printer combination.

The closest prior art, Ohga. (US 2002/0057434), teaches a method of color profile transformation with respect to the specific white point and black point of a particular media. Ohga teaches a system and method for matching color profiles between a source and destination by considering a white point and black point of a media and the white point of the light.

Conclusion

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Dillon J. Murphy whose telephone number is (571) 272-5945. The examiner can normally be reached on M-F, 8-5.
